

## Silicon Valley Transportation Electrification Clearinghouse Meeting

November 17, 2022  
10:00 AM – 2:00 PM PDT

### Notes

Full Presentation – includes links to more information & an email listserv from the Office of State and Community Energy Program (SCEP) at the U.S. Department of Energy

Thanks to all our speakers, and those who contributed to the group discussion, including Danielle Lee from Mountain View, Madeline Willett from Sunnyvale, Tessa Sanchez from Tesla, Heather Hochrein from EVmatch, and James Russell from CLEAResult.

Among the many takeaways were:

- There is a need for more analysis and planning re: capacity and needs on the government agency side, including fleet and EVI at public facilities
- In addition to the data that SVCE has compiled on [special populations](#), other data layers that illustrate capacity and current installed infrastructure would be valuable
- Another view of equity: in some communities, there is a workforce whose demographics and charging needs that don't match up with the residential demographics, so some programs may not fit
- Grant writing capacity is a need; SVCE could potentially help in multi-agency applications
